EXPERIENCE

Semi-Senior Software Engineer (06/2025 – Present) **MarketFully**

- Developed and maintained full-stack features for an AI-powered SaaS platform using TypeScript, React, Python, Celery, Prisma, PostgreSQL, Redis, and AWS, among other technologies.
- Architected and implemented a granular RBAC permission system from scratch, including route-level enforcement, frontend access-control components, an admin dashboard for role management, and a DB seeder.
- Designed and built the platform's public API with auto-generated OpenAPI specs, multi-API key management and webhook delivery with payload signing.
- Refactored the feature flags system with ConfigCat, improving the integration pattern and enabling granular control over content creation.
- Authored 3,000+ lines of technical documentation, including security standards, RBAC permission system, and relevant features architecture, establishing patterns adopted across the engineering team.

Software Developer (02/2025 – 06/2025) **OneTree**

- Developed frontend components and backend microservices using JavaScript, Node.js, and Java, delivering reliable cross-platform functionality.
- Integrated systems and performed complex data migrations using RESTful APIs, MySQL, and Postman, ensuring consistent and efficient data flow.
- Maintained technical documentation for features, integrations, and configurations.

Software Engineer (04/2024 – 02/2025) **Vodafone**

Full Stack Jr. Developer (05/2023 – 04/2024)

- Promoted to take on new responsibilities while maintaining prior duties.
- Developed and maintained full-stack features using TypeScript, React, Next.js, Node.js, Sequelize, PostgreSQL, Redis, and AWS, among other technologies.
- Managed monthly production releases, coordinating cross-team dependencies across five teams and ensuring backward compatibility and stable deployments.
- Involved in weekly architectural meetings, using flowcharts, diagrams, and Confluence to document the Architectural Decision Records (ADRs).
- Led a major refactor of the entire project, reducing resource consumption by 30% and significantly accelerating the development of new features.
- Centralized email generation using the Builder pattern, reducing over 30,000 lines of duplicated code to ~7,000 reusable lines, simplifying email creation and ensuring consistent styling.

EDUCATION

Computer Science Degree
UADE, 2018 – 2022

SKILLS

Programming Languages

JavaScript, TypeScript, Python, Java, Rust, SQL, HTML, CSS

Frontend

React, Next.js, Remix, Redux, Zustand, Angular, RxJS, NgRx, GSAP, Lenis, Anime.js, Three.js, Storybook, MUI, ChakraUI

Backend

Node.js, Express, NestJS, Prisma, Sequelize, SpringBoot, Hibernate, PostgreSQL, MySQL, MongoDB, Redis, Kafka

Testing & Code Quality

Jest, Vitest, Karma, Jasmine, Cypress, Biome, ESLint, Prettier, SonarQube, CodeRabbit

CI/CD & Tools

Git, Docker, AWS, Jenkins, Jira, DBeaver, Postman, Posthog, Kibana, Grafana, Prometheus

LANGUAGES

Spanish - Native

English - Proficient (C1)
